

	Rewiring network	Fixed network
Probabilistic response	P-R	P-F
Deterministic response	D-R	D-F

Table 1: The four different ways we implement the model, corresponding to differing amounts of quenched randomness. These are the combinations of fixed or rewired networks and probabilistic or deterministic response functions. In the thermodynamic limit of the rewired versions, where the network and response functions change every time step, the mean-field theory (Sec. ??) is exact.
